### Permanent Looping the Straps

**Both Straps:** Ensure both straps are the same length prior to sewing them into position. Use the long tail strands to sew end to the 1st row of the strap. Do this for each.

### Attach Triangle to the other Side of the Tube

Lay down the tube with the straps facing flat on a surface. Press down to ensure the tube is flat without wanting to self twist. Correct any twisting if needed before attaching. Attach the triangle to tube with a whip stitch. The belt straps and triangle should lay flat at the same time. When wearing, the base triangle should hang flat to the proper angle.

### Wearing the Tail

Slide the belt through the pants as normal. Pick up one loop of the tail, insert the belt through the middle loop on the pants and insert the other loop on the tail and continue to insert belt through remaining belt loops. The two straps prevents with the pant loop inbetween prevents the tail from sliding out of the center position.
